Ledamus Cloud

CAPABILITY STATEMENT
NOVEMBER 2026

Private AI, cyber security and smart city infrastructure for Philippine institutions

Ledamus Cloud builds and runs private AI, security operations and cloud systems for local government units, government agencies, banks, cooperatives and enterprises in the Philippines. The client's data stays in an environment only the client controls, and Ledamus handles setup, training and maintenance.

GLOBAL HQ	LOCAL OPERATIONS	SERVES
Vancouver, BC, Canada	Philippines	23 types of organizations

CORE CAPABILITIES

Private AI for organizations

An AI assistant that answers only from the documents the client approves, in Tagalog, Bisaya and English. Drafts letters and reports, encodes handwritten forms, and sends SMS or Messenger notices. Staff stay in charge of every decision.

Cyber Security Structure

Security operations for government offices: incident response retainer, protection of citizen data and election systems, and monitoring guided by threat intelligence.

Smart City Infrastructure

One command center for CCTV, sensors and 24/7 911 dispatch: city-wide map, AI on cameras (smoke, fire, plate numbers, night vision, watchlist-only face matching), and flood-level alerts.

Banks and cooperatives

Transaction monitoring that flags suspicious transfers for the fraud team, in support of RA 12010 (AFASA) and BSP Circular 1213; CCTV recognition at branches and ATMs; protection of depositor data.

Cloud and application platform

Private cloud servers, one-click business applications, a website and app builder, backend services and domains, under the Ledamus brand.

Implementation and support

Setup, training in Filipino languages, maintenance, and the documents a procurement needs: technical proposal, sample terms of reference, implementation plan.

WHY LEDAMUS

- Built for Philippine offices: Filipino languages, low-bandwidth and mobile use
- No in-house IT team needed: Ledamus handles setup, training and maintenance
- Start with one phase and add the next without replacing the first
- One accountable partner for AI, security, cloud and support

WHERE THE DATA LIVES

- On the client's own server, or on a private cloud server used by no one else
- Access limited to authorized personnel, with a log of every access and change
- Data encrypted; never used to train public AI models
- Designed around the Data Privacy Act of 2012 (RA 10173)

HOW WE ENGAGE

1. Phone call
Our team calls your office's contact person, such as the IT officer or administrator; free.

2. Needs assessment
Current processes, systems and the first problem to solve.

3. Proposal and sample TOR
Technical proposal, sample terms of reference and specifications for the BAC.

4. Pilot
One office, branch or barangay, to show results before expanding.

5. Rollout and support
Full deployment, training and ongoing maintenance.

DOCUMENTS WE PREPARE FOR THE BAC

- Capability statement (this document)
- Technical proposal
- Sample terms of reference (TOR) and specifications
- Implementation plan and schedule
- Data privacy plan aligned with RA 10173
- Training plan
- Draft service level agreement (SLA)

PROCUREMENT

The procuring entity chooses the mode of procurement under RA 12009 (New Government Procurement Act). Ledamus prepares the documents for the chosen mode, including competitive bidding, competitive dialogue and unsolicited offer with bid matching.

ORGANIZATIONS WE SERVE

- Barangays
- Fuel Stations
- Groceries and Stores
- Cooperatives
- Schools and Training Centers
- Clinics, Dental Clinics, and Pharmacies
- Restaurants, Eateries, and Cafés
- Logistics, Delivery, and Warehouse
- Construction and Contractors
- Property Management and Rentals
- Accounting, Legal, and Professional Offices
- Farms, Agrivets, and Agri-Supply
- Municipalities and Cities (LGU)
